Initial Release 4.6

Data Type : Calendaring and Scheduling

SCHEDULE - Data structure for a schedule.

```
#include <schedule.h>
```

Definition :

```
typedef struct {
    DWORD    reserved[8];
    DBID      dbReplicaID; /* Users mail file replica ID */
    TIMEDATE_PAIR Interval; /* events etc. are in this
                           interval */
    DWORD     dwErrGateway; /* gateway error retrieving this
                           schedule */
    STATUS     error; /* error retrieving this
                     schedule */
    WORD       wReserved; /* unused at this time */
    WORD       wOwnerNameSize; /* size of owner name
                           (includes term.) */
    /* followed by owner name */
} SCHEDULE;
```

Description :

Data structure for a schedule.
